Firmware

Hello, Dear.
Nice to meet you.
I've seriously read your post and I have understood what you need.
I am sure that I can be the best developer who can perfectly complete your project.
I am a senior Embedded software Developer with 10+ years of experience.
I have rich experience in firmware development with MSP430, ESP32, NRF, STM, ARDUINO, RASPBERRY and PIC, PLC, FPGA, etc.
I also have rich experience MQTT, AWS, GPRS, GPS, GSM, SMS, IoT, Zigbee, Wifi, Bluetooth, UART, SPI, I2C, ETH, CAN....
I am using C, C++, Python for development in Arduino IDE, Platform.io and Espress IDF etc.
I have completed many Projects without letting down a single Client....As Many Clients are still in touch based on my Working strategies and their satisfaction on their all previous Projects.
I have enough ability to finish your project.
I can start work immediately and work full time.
I will do my best.
Looking forward to hearing from you.
Thank very much for your suggestion.
Best Regards.

MOBILE

Hello ☆☆☆☆☆ I am senior mobile App Developer ☆☆☆☆☆
I've seriously read your post and I have understood what you need.
I am sure that I can be the best developer who can perfectly complete your project.
I am a senior Mobile App (Android and IOS) developer with 10+ years of experience.
I have an intensive background in developing mobile apps, both iOS and Android, and have worked with ... (React Native, Flutter, Python, Kotlin, Java, Swift, Object C etc) .
I also always make reusable clean code and have great eye for UI/UX.
I have worked in Ark Trading Company and developed Mobile Trading Apps.
Here is my previous work.
<https://apps.apple.com/gb/app/ark-trader/id1511800019?ign-mpt=uo%3D2>
I have completed many Projects without letting down a single Client....As Many Clients are still in touch based on my Working strategies and their satisfaction on their all previous Projects.
I think it is necessary to discuss further over chat.
Best Regards

AI

☆☆ Hello Dear. ☆
As a Professional Machine Learning Engineer, I have strong knowledge and rich experience with Mobile App, Flutter, Python, Pytorch, Tensorflow, Image Processing, OpenCV, OpenPose, Real-Time Object Detection/Recognition using Yolo, Face Detection using MTCNN, Face Recognition using FaceNet, OCR, Tesseract OCR, easyOCR, NLP, ChatBot, OpenAI ChatGPT, Fine tuning the OpenAI API model, Speech

Unity

Hello Dear.
Nice to meet you.
I've seriously read your post and I have understood what you need.
I am sure that I can be the best developer who can perfectly complete your project.
I am a senior Unity2D/3D and Unreal & Roblox Game developer with 10+ years of experience.
This is my old game in unity and unreal .
https://drive.google.com/drive/folders/1I37o8WDeDLBPvEndYg9Y-6nNy_bKRLyGE?usp=share_link
I have experience Multiplayer Game development with Photon, Web Socket in unity
I have completed many Projects without letting down a single Client....As Many Clients are still in touch based on my Working strategies and their satisfaction on their all previous Projects.
I have enough ability to finish your project.
I can start work immediately and work full time.
I will do my best.

If you award me now, I will do my best and make your day!
Looking forward to hearing from you.
Thank very much for your suggestion.
Best Regards.

FULLSTACK

☆☆ Hello Dear. ☆
I have finished reading your job proposal very carefully.
So I know you are looking for senior web developer.
I mastered all the skills you require for this project.
I am a professional Full Stack Web developer who has rich experience with PHP/Laravel, Python/Django, React (MEARN STACK) etc.
My best skills are PHP/ Laravel, React and Python/Django.
I always make reusable clean code.
Here are my previous work.
<https://www.vivint.com/>
<https://www.solvd.com/>
<https://csr.gigabyte.com/>
<https://fm-tours.ro/>
I have enough ability to finish your project.
I can start work immediately and work full time.
I will do my best.
This is my contact address.
Whatsapp: +1 (717) 964-8247
Telegram: <https://t.me/lexus810>
Skype address is live: .cid.537fff754609bbf1
Slack Gmail: keremeris20@gmail.com
If you award me now, I will do my best and make your day!
Looking forward to hearing from you.
Thank very much for your suggestion.
Best Regards.

Blockchain

Hi, there!
I've seriously read your post and I have understood what you need.
I am a senior smart contract developer with rich 5+ years of experience.
I have good knowledge in Blockchain, Ethereum, EOS and NFT.
I have already excellent experience in smart contract development using solidity and c++.
So I am familiar with Ethereum and EOS based Dapps.
Also I have already ever published ERC20 based token and private blockchain

and rich experience with mobile App, flutter, Python, Pytorch, Tensorflow, Image Processing, OpenCV, OpenPose, Real-Time Object Detection/Recognition using Yolo, Face Detection using MTCNN, Face Recognition using FaceNet, OCR, Tesseract OCR, easyOCR, NLP, ChatBot, OpenAI ChatGPT, Fine-tuning the OpenAI API model, Speech-to-Text/ASR(Automatic Speech Recognition using Kaldi), Text-to-Speech(using TalkNet, and TalkNet2), State-of-the-Art NLP models such as BERT, XLnet, PalM, HuggingFace, Voice Conversion using ConVoiceNet.

I also always make reusable clean codes.

My best skill is AI.

I can start working immediately and work full time on your timezone.

I think I am a great fit for this project.

My whatsapp phone number is +44 7496 729620

my skype address is live:.cid.537fff754609bbf1

and my telegram is <https://t.me/softdev94810>

and slack gmail is keremeris20@gmail.com

Looking forward to working with you.

Thanks.

Reverse Engineering and C++

Hello, Dear.

Nice to meet you.

I've seriously read your post and I have understood what you need.

I am sure that I can be the best developer who can perfectly complete your project.

I am a senior Reverse Engineer & Qt,C++ and C# ,Assembly, Python ,Java developer with 10+years of experience.

and I have rich experience Kernel Driver Development with windows and linux.

I have completed many Projects without letting down a single Client....As Many Clients are still in touch based on my Working strategies and their satisfaction on their all previous Projects.

I think it is necessary to discuss further over chat.

Best Regards !

I have already excellent experience in smart contract development using solidity and c++.

So I am familiar with Ethereum and EOS based Dapps.

Also I have already ever published ERC20 based token and private blockchain using EOS as well.

And I have good experience in Dex such as Uniswap and Pancakeswap.

I have performed some projects regarding with Uniswap and PancakeSwap forking.

I am really interested in your project and would like to discuss this project with you in more detail.

My work

<https://thenovatar.com/>

<https://amplua.ru/blockchain>

<https://www.playamo.com/>

<https://app.iust.bet/>

I am available to work with you immediately and will try to give you satisfaction.

my skype address is live:.cid.537fff754609bbf1

and my telegram is <https://t.me/softdev94810>

and slack gmail is keremeris20@gmail.com

I think it is necessary to discuss further over chat.

Looking forward to hear from you in there.

Sincerely,

AI

Write a short, human-sounding, personalized proposal using provided information and format. Avoid using generic AI wording, instead use more human and precise alternatives.

Always start proposal with "Hi, there".

IN NEXT PARAGRAPH, SHORTLY introduce me WITHOUT CALLING BY NAME, I have 10+ years of experience in Matching Job Skills (adjust the expertise based on project requirement). DONT INCLUDE MY NAME ANYWHERE.

IN NEXT PARAGRAPH, SHORTLY explain client that I have understood your requirement. Explain how the project will be completed providing a clear and professional solution according to the job description.

IN NEXT PARAGRAPH, ACCORDING TO JOB SHORTLY Tell client that I have completed 50+

Desktop/Mobile application and Embedded software.

IN NEXT PARAGRAPH, tell client that, I would like to connect with him in chat to discuss more about his project.

IN LAST PARAGRAPH, end proposal with

"Thanks"

Dear Martniez,
I hope this message finds you well.
Over the past month, we have been closely monitoring and assessing the technical challenges you've been experiencing, including PC performance and internet speed issues. Despite our efforts to support you during this period, these persistent technical limitations have significantly impacted our project's progress and overall efficiency.
After careful consideration, I have decided to discontinue our working relationship effective from now. This decision was not made lightly, but it is necessary to ensure the success and timely completion of our projects.
If you were resolved everything, we can continue work.
I want to express my gratitude for the time and effort you've dedicated to our collaboration. We will pay 100\$ for your time until now.
Thank you for your understanding.
Best regards,

Outlier is utterly deceptive and a complete waste of time. I invested nearly a month, only to find myself misled by false promises and empty assurances. Their operations feel like a scam, offering no real value and leaving me extremely frustrated and angry. This has been one of the worst experiences, and I would urge others to stay far away from this platform."

"My experience with Outlier was a nightmare of wasted time and broken promises. After dedicating nearly a month, I discovered that their platform is nothing more than a fraudulent operation, built on misleading claims that lure you in and leave you empty-handed. Outlier operates with zero transparency or respect for their users' time, and I am beyond furious with their shameless approach. Avoid this platform at all costs if you value your time and trust."

"Outlier is the most deceitful platform I've ever encountered—an outright scam that preys on people's trust and time. I invested nearly a month, only to be misled and disrespected by their false promises and manipulative practices. This experience has been infuriating beyond words; Outlier operates with blatant disregard for integrity or honesty, leaving users frustrated and betrayed. I cannot stress enough: steer clear of this sham of a platform if you value your time, effort, and peace of mind."

Upwork Profile

Monday, July 22, 2024 7:38 PM

I am a 10+ software engineer of all various platforms, languages and environments, in addition to a 7+ year firmware / hardware engineer.

I am very well skilled in various MCU platforms, i.e. ESP32, NXP, STM32, Nordic, Silicon Labs, AVR, etc., in addition to Raspberry PI, Beaglebone, embedded Linux platforms, etc.. I have plenty of my own hardware, including these devices, and sensors to prototype with right away. I have engineered projects in a variety of MCU's with GPS, Bluetooth, WiFi, LTE and LoRa, along with Android and iOS apps to communicate and control these devices. I have an extensive home office lab of scopes, meters, debugging devices / tools, hardware components, etc...

In addition to firmware engineering, I've got plenty of experience in the software world, Unity and Unreal Game , web servers / services, Mobile apps, etc... Experience even with building custom Android OS'es and drivers for custom hardware.

I have no doubt that with my embedded engineering experience and desktop/mobile software engineering experience, I can be your one stop shop here to engineer an entire solution for you, backend firmware to front end software.

I work full time out of my home, and freelance engineering is my only profession, i.e. I don't moonlight. I generally work from 5:00 AM to 5:00 PM Time zone in Colombia, however I am very responsive, even if not immediately in front of a computer, i.e. after hours, weekends, I pride myself on responding 99% within an hour if not faster, when possible.

Firmware

I am a 20+ software engineer of all various platforms, languages and environments, in addition to a 7+ year firmware / hardware engineer. I am very well skilled in various MCU platforms, i.e. ESP32, STM32, Nordic, Silicon Labs, AVR, etc., in addition to Raspberry PI, Beaglebone, embedded Linux platforms, etc.. I have plenty of my own hardware, including these devices, and sensors to prototype with right away. I have engineered projects in a variety of MCU's with GPS, Bluetooth, WiFi, LTE and LoRa, along with Android and iOS apps to communicate and control these devices. I have an extensive home office lab of scopes, meters, debugging devices / tools, hardware components, etc... In addition to firmware engineering, I've got plenty of experience in the software world, web servers / services, mobile apps, etc... Experience even with building custom Android OS'es and drivers for custom hardware. I have no doubt that with my embedded engineering experience and desktop/mobile software engineering experience, I can be your one stop shop here to engineer an entire solution for you, backend firmware to front end software. I work full time out of my home, and freelance engineering is my only profession, i.e. I don't moonlight. I generally work from 5:00 AM to 5:00 PM Central Time, however I am very responsive, even if not immediately in front of a computer, i.e. after hours, weekends, I pride myself on responding 99% within an hour if not faster, when possible.

Unity

I have over 8 years of experience in Unity and Unreal. I have developed 12 games so far ranging from turn based to online strategy with match making. I am experienced with Unity and Unreal's event flow and have a firm grasp of the Structures and Idioms needed in Game Development. My expertise lies in multiplayer games with simple rules that yield complex interactions between users. It doesn't take me long to have a working prototype and my projects are mostly designed to work with mobile and various account systems like Steam, IOS and Google-Play. My recent, public, project is a game called Guns of Glory. The game was completed in 20 weeks and offers innovative game-play. This is blazing fast compared to other 3D chess variants that typically estimate 12-15 months of development time and leaves a lot more room for visual polish and Q&A. What more can I say?

I also have experience in Pose recognition using NuiTrack and Azure Kinect.

Senior Desktop/Embedded Software Developer | C, C++, Python, Swift, and Java Expertise

I am a seasoned software developer with over 10 years of experience specializing in desktop and embedded software solutions. With expertise in C, C++, Python, and Swift, I develop efficient, scalable, and secure applications for a wide range of industries, including automotive, IoT, and industrial automation. My focus on high-performance code and robust embedded systems enables me to deliver solutions that meet the most demanding performance and reliability standards.

Key Skills:

Embedded Systems Development (RTOS, Firmware, Device Drivers)
Desktop Software (C/C++, C#/.Net, Python, Java, Swift etc)
Microcontroller Programming (ARM, ARDUINO, ESP32, STMXX, NXP, Nordic, Silicon Labs, Raspberry, PICxxx etc)
Cross-Platform Application Development
Low-Level Programming & Optimization
System Integration & Testing
Real-Time Operating Systems (RTOS) and Embedded Linux
Communication Protocols (UART, I2C, SPI, CAN)
IoT Solutions & Device Integration

What I Offer:

Customized embedded software solutions from prototyping to deployment
Desktop applications for seamless user experiences
Cross-platform development ensuring smooth functionality on multiple devices
Deep understanding of hardware-software interaction and debugging tools
Efficient and clean code with performance and memory optimization.

Let's collaborate and turn your vision into a reliable, cutting-edge solution. I am passionate about delivering software that is not only functional but also future-proof.

Senior Software/Firmware Engineer.

I am a 10+ software engineer of all various platforms, languages and environments, in addition to a 7+ year firmware / hardware engineer.

I am very well skilled in various MCU platforms, i.e. ESP32, NXP, STM32, Nordic, Silicon Labs, AVR, etc., in addition to Raspberry Pi, Beaglebone, embedded Linux platforms, etc.. I have plenty of my own hardware, including these devices, and sensors to prototype with right away. I have engineered projects in a variety of MCU's with GPS, Bluetooth, WiFi, LTE and LoRa, along with Android and iOS apps to

communicate and control these devices. I have an extensive home office lab of scopes, meters, debugging devices / tools, hardware components, etc...

In addition to firmware engineering, I've got plenty of experience in the software world, Unity and Unreal Game , web servers / services, Mobile apps, etc... Experience even with building custom Android OS'es and drivers for custom hardware.

I have no doubt that with my embedded engineering experience and desktop/mobile software engineering experience, I can be your one stop shop here to engineer an entire solution for you, backend firmware to front end software.

I work full time out of my home, and freelance engineering is my only profession, i.e. I don't moonlight. I generally work from 5:00 AM to 5:00 PM Central Time, however I am very responsive, even if not immediately in front of a computer, i.e. after hours, weekends, I pride myself on responding 99% within an hour if not faster, when possible.

SKILL.

C++,C,C#,Python,Arduino,Esp32,Stm32,Raspberry pi, Unity, Unreal , Godot

Embedded: Embedded C/C++, Firmware, Bootloaders, OTA Updates, RTOS/FreeRTOS, Low-power design, Board bring-up, JTAG/SWD debugging

MCUs: ESP32, STM32, NXP, Nordic nRF, Silicon Labs, AVR

Connectivity: BLE, Bluetooth, Wi-Fi, LTE, LoRa/LoRaWAN, GPS, MQTT, TCP/IP, UDP

Industrial / Buses: CAN/CANopen (if applicable), Modbus (RTU/TCP), UART, SPI, I2C

Linux: Embedded Linux, Device drivers, Yocto (only if true), systemd, networking

Mobile: Android (Java/Kotlin), iOS (Swift)

Backend: REST APIs, WebSockets, Databases (PostgreSQL/MySQL if true)

Other: Unity, Unreal, AOSP/Custom Android builds (only if true), Test automation

Portfolio

1. BLE + Wi-Fi IoT Sensor Node (ESP32)

Describe the work you completed (required)

Built an ESP32-based IoT sensor node with a reliable BLE onboarding flow and Wi-Fi connectivity for cloud telemetry. Implemented BLE GATT provisioning (scan/connect/credential transfer), Wi-Fi join + reconnect strategy, sensor sampling, and secure data upload via MQTT/HTTPS. Added watchdog recovery, structured logging, and remote configuration to make the device stable for field use. Delivered firmware, provisioning protocol notes, and a test/validation checklist for repeatable deployments.

Describe your work with tags (comma-separated)

esp32, iot, embedded-firmware, ble, bluetooth-low-energy, wifi, mqtt, https, sensors, provisioning, freertos, ota, telemetry, iot-device, embedded-cpp

What tools and software did you use? (Optional)

ESP-IDF, PlatformIO, VS Code, Git/GitHub, Wireshark, Mosquitto (MQTT), Postman, Serial/UART

tools, JTAG/SWD debugger, logic analyzer, oscilloscope

What skills did you use? (Optional)

Embedded C/C++, ESP32, RTOS/FreeRTOS, BLE GATT, Wi-Fi networking, MQTT/HTTP(S), TCP/IP, sensor integration (I2C/SPI), power/reliability design, debugging, protocol design, documentation

What industry was the work for? (Optional)

IoT / Smart Home

(Alternatives: Industrial IoT, Asset Tracking, Environmental Monitoring)

2. Cross-Platform Desktop Control App

Describe the work you completed (required)

Designed and developed a cross-platform desktop application used to configure, monitor, and control embedded/IoT devices during development and field testing. Implemented device discovery and connection workflows, a real-time dashboard for status/telemetry, and tools for device configuration such as Wi-Fi credentials, calibration values, and firmware version checks. Added robust communication handling with retries, timeouts, and detailed logs to simplify troubleshooting. Delivered a clean UI, an installer-ready build, and documentation describing the protocol and usage steps.

Describe your work with tags (comma-separated)

desktop-application, cross-platform, iot, device-control, gui, telemetry, tcp-ip, bluetooth, serial-port, websocket, api-integration, logging, installer

What tools and software did you use? (Optional)

Git/GitHub, VS Code, Postman, Wireshark, SQLite (if used), CI build scripts (if used)

(If you want a more concrete tool list, tell me what you used: Electron, Qt, .NET/WPF, Python/PyQt, JavaFX, etc.)

What skills did you use? (Optional)

Desktop application development, UI/UX, real-time data visualization, networking (TCP/IP), protocol integration, async programming, debugging, packaging/build automation, documentation

What industry was the work for? (Optional)

IoT / Device Management

3. Cross-Platform Desktop Trading App with AI Signals

Experience

Experience #1 (for ESP32 IoT portfolio)

Title: Senior Embedded Firmware Engineer (IoT / ESP32)

Company: Self-Employed

Country: Colombia

City: bogota

Start month/year:2013/4~2014/8

End month/year:

Work description (paste this):

Developed ESP32-based IoT firmware for sensor devices using BLE provisioning and Wi-Fi connectivity for cloud telemetry. Implemented BLE GATT onboarding, Wi-Fi join/reconnect with backoff, sensor sampling over I2C/SPI, and secure telemetry publishing via MQTT/HTTPS. Added reliability features including watchdog recovery, structured logging, and remote configuration to support field deployment. Delivered firmware builds, provisioning/protocol documentation, and test/validation procedures for repeatable deployments.

Experience #2 (for Desktop App portfolio)

Title: Desktop Application Developer (Device Control & Telemetry)

Company: Self-Employed / Freelance

Country: Colombia

City: bogota

Start month/year: 2017/3~2017/12

End month/year: [Month] [Year] (or "Present" if still active)

Work description (paste this):

Built a cross-platform desktop application to configure, monitor, and control embedded/IoT devices during development and field testing. Implemented device connection workflows (USB serial/TCP/IP/BLE depending on target), real-time telemetry dashboards, configuration screens (credentials, calibration, device settings), and detailed logging for troubleshooting. Focused on stability using timeouts, retries, and clear user feedback for connection states.

Education.

Country: colombia

University/College : Universidad Nacional de Colombia

Degree : Bachelors Degree in Computer Scinence.

2005~2009

Welcome to Bee SFT! This is a series of projects where you will be given prompts. Your mission is to write the best response possible!

There are many projects involved here, so please be aware of which particular queue you are currently working in as the instructions are often similar, but NOT identical. Please carefully review these instructions before starting.

These are the general instructions for the 3 different pipelines with some sub categories. Please be aware of which one you are working on:

- 1.Coding Standard

a. Code Generationb. Problem Reflectionc. Test Reasoningd. Code Refactoring
- 2.Coding Advanced

e. Retrieval Augmented Generation (RAG)f. Test Generationg. Bug Fixingh. Solution Reasoning

The overall goal of this project is to develop creative, engaging conversations, stories, and analysis that are more human and engaging than the best models on the market today. 🐝🐝

1) Prompt+Response -Sgle turn.

In this project, you are provided with a prompt (Code Generation, Problem Reflection, Test Reasoning, Code Refactoring, Retrieval Augmented Generation (RAG), Test Generation, Bug Fixing, Solution Reasoning) and basic guidelines.

Step 1: Read carefully the task

Pay attention to the task type (Swift/Python).
Review the prompt thoroughly and understand the requirements and users intention.

Step 2: Create the perfect response
After understanding the prompt, you will be given an incomplete response.

(Always check the code given, it should correctly execute what the prompt asks)

Your mission is to rewrite/add to it in order to create the perfect response!

This response must be:
-Highly creative
-Neatly organized and easy to read
-Thoughtfully designed to be delightful to the reader

Your response needs to be better than the best LLM available (state-of-the-art model: SOTA).To accomplish this:
-Review the Task Type: In the UI there will be a note indicating the task type (Code Generation, Problem Reflection, Test Reasoning, Code Refactoring, Retrieval Augmented Generation (RAG), Test Generation, Bug Fixing, Solution Reasoning).
Review the task-specific instructions for any clarifications.
-Use Perfect Spelling, Grammar, and Punctuation: In order to beat SOTA, you will need to proofread your work and eliminate any grammatical, spelling, punctuation, or other errors.
-Consider the User: Need to be sure that you respond to all of the following questions:
Would the response you created delight the user relative to the prompt?
Does it address the prompt completely?
Does it understand the intention of the prompt?

An LLM is just a computer!! You're a real person.
Shouldn't be too hard to beat, right? 🐝🐝🐝 + 🐝 = 🐝🐝

Step 3: Justification

After you finish editing, you will have to label your response according to the given questions.

If it is not possible to beat the model's response, we must provide a strong argument explaining why this is not achievable.

This should be done in the justification box:

2) Prompt + Response - Multiturn

A Multi-turn conversation strings together multiple prompts and responses. For example, a 3 -turn conversation would look like:
-Prompt 1 / Response 1 ->
-Prompt 2 / Response 2 ->
-Prompt 3 / Response 3
-End of conversation

REMEMBER: In Multi-Turn conversations, there are multiple prompts and responses, each prompt and response builds off the context provided in the previous prompt and response. After the initial prompt and response, the conversation continues with additional questions, clarifications, or responses, ultimately forming an extended dialogue.

⚠️It's extremely important to maintain continuity in the multi-turn prompts. In case the task fails to fulfill this, - the task will receive an automatic 1 or 2 ⚠️

Every prompt after the first must relate to the category and subcategory and continue a natural conversational flow as a follow-up to the previous response.

Important considerations

Read carefully and understand the given prompt.
Ensure that the response adheres to the specified format and structure.
Check for and correct any grammatical and spelling errors when rewriting the response.
Include comments within the code to enhance clarity and comprehension.
The response should include a detailed explanation (without being verbose) of the code, describing what is happening at each step.
Ensure that the overall response is clear, concise, and informative, making it easy for the reader to understand.
Your response must be well-organized and understandable.

Strategies to beat SOTA

All levels can be considered simultaneously; they are not mutually exclusive.

Level - basic

Prompt -

- Provide insightful comments on relevant code elements and/or its structure.
-Avoid verbosity and use the appropriate programmer's perspective.
Your evaluation comments relevant to the problem being asked, providing details and necessary context to

Task Categories and Examples

Here are the categories, please take a look. (Always keep them in your notes while doing the tasks.)

Category	Sub Category	Description
Standard Coding	Code Generation	Problem → solution code
	Problem reflection	Given a problem, address the problem goal, inputs, outputs, rules, constraints in bullet points, then generate a list of 2–3 possible methods described in natural language.
	Test Reasoning	Problem + test → explain why each test input leads to the output
	Code Refactoring	Code + instruction (e.g., add docstring, comment, modularize code) → improved code
	Structured Data Generation	To generate textual data (often to be used for machine learning, data science, and/or computer science use cases) based on instructions or templates/examples provided by users, e.g. "here is a template of json: {\"A\": ..., \"B\": ...}. generate 3 json strings with this template for the following use: ..."

Category	Sub Category	Description
Advanced Coding	Retrieval Augmented Generation (RAG)	Input: problem retrieved documents / web pages Output: natural language explanation and/or code
	Test Generation	problem → unit tests problem + example unit test → more unit tests. The goal is to validate that each unit of the software performs as expected.
	Bug Fixing	Write a prompt about where you want the model to be DEBUGGING something. Wrong code + error message/feedback → analyze why the code is wrong and provide correct code.
	Solution Reasoning	problem + code solution → reasoning in bullet points on how does the solution solve the problem, analyze its correctness and efficiency. Provide meaningful code functions, which improves understanding of how the code functions

Task Interface

While we know that each project looks different, this section showcases the tasking interface and the steps to follow.

1. When tasking as an attempter, the first section is for reminders/info for your specific project.
Please note: as we progress, the content in these sections may change.

Evaluation Criteria - Rubric

		1-2 (Terrible)	3 (Not Passing)	4-5 (Excellent)
INSTRUCTION FOLLOWING				
Language	Prompt or Response is not in the indicated language, dialect, or spelling convention Prompts or Responses are partially in the indicated language but have major errors that make them hard to understand	Prompts or Responses are in the indicated language, dialect, or spelling convention, but have some spelling, grammar, or phrasing errors	Prompts or Responses are in the indicated language, dialect, or spelling convention with no errors or only minor errors	

	Length - The Response significantly deviates from the length instructions (500 words' or '2 sentences')	Length - The Response partially follows length instructions	Role of Context
--	---	---	-----------------

Prompt -

- Provide insightful comments on relevant code elements and/or its structure.
- Avoid verbosity and use the appropriate programmer's perspective.
- Focus particularly on comments relevant to the problem being solved, providing concise and necessary context to understand the task's purpose.

Code -

- Develop modular code following specific standards of good programming in the corresponding language and for programming languages.
- Detect state-of-the-art (SOTA) error patterns such as omitting types when defining variables.

Level - Intermediate

Prompt -

- Use your own background, such as a coder and specialist in a less mainstream field (Biology, Astronomy, Industrial Design, etc.).

Code -

- Apply optimization and heuristic strategies, both computational (parallelization, concurrency, for instance starting from simple tasks like weighted averages to more intermediate strategies like dynamic programming heuristics) and in skilled practices, e.g., using Regex instead of loops and conditionals for filtering or search problems.

Level - Advanced

Prompt -

Code -

- Evaluate computational complexity in dimensional aspects (time, space, amortization, or best -case scenarios) and explore possibilities for improvement. Develop highly exclusive modularity using specific libraries with proven performance for specific tasks, such as using NumPy for numerical computation, tailored to the context of the work.

General Attempter Instructions

Standard Coding Category

Instruction Following	significantly deviates from the length instructions (500 words or 2 sentences)	Length - The Response partially follows length instructions	Length - The response exactly or nearly follows the length requirements
	Role of Context The Prompt is unclear about the role or context expected from the response The Response does not follow role or context instructions Tone of voice - The response contradicts the tone requested in the prompt or takes an inappropriate tone of voice for the context	Role of Context The Response is mostly clear on the role or context The response mostly follows contextual instruction Tone of voice - The response generally follows the tone requested in the prompt, with only minor errors	Role of context - the response perfectly adheres to the prompt's context or role Tone of voice - The response exactly adheres to the requested tone, with virtually no errors or breaks

CONCISE			
Repetition and Length	• Repetition - The response communicates the exact same ideas in slightly different ways several times. • Length - The response exceeds the word limit directly requested by the prompt. • Verbosity - Multiple sentences to explain concepts that are possible within a sentence or two.	• Repetition - The response communicates the exact same ideas in slightly different ways once or twice. • Length - The response is close to the length specified explicitly by the prompt. • Verbosity - Responses still may have some overly verbose sentences or ideas.	• Repetition - Response does not unnecessarily repeat information, explicitly or exactly. • Length - The response fits the length specified explicitly by the prompt. • Verbosity - Responses efficiently communicate in simple and precise sentences.
	• Focus - There is no central theme or message to the response. • Relevance - There is significant irrelevant or distracting information in the response. • Coherence - All prompts are unrelated or disjointed from the conversational category.	• Focus - There is an overarching theme, but it's not clearly followed in the response. • Coherence - Two or more prompts are unrelated or disjointed from the conversational theme that the conversation does not flow naturally. • Relevance - A few more relevant items than needed.	• Focus - There is a clear theme that unifies the bullets or details of the response. • Relevance - Details are relevant or provide satisfying dimensions of the core theme. • Coherence - All prompts are related to the conversation.
Tone		• Inappropriate, abrupt, or otherwise unpleasant tone. • Conversational and engaging tone.	• Conversational and engaging tone.
TRUTHFULNESS			
Truthfulness	• Factual Claims - Few facts in the response are accurate. Most claims in the response are not accurate. • Non-verifiable information - Any subjective points do not reflect domain expertise or <u>prompt</u> to not repeat <u>prompt</u>. It may also seem factually where it's <u>probably</u> subjective. • Refuting false claims - The response does not at all correct false claims.	• Factual claims - Most facts in the response are completely accurate, confirmed by online research where necessary. • Non-verifiable information - Subjective points reflect mostly majority expert consensus reports where the response doesn't state the response <u>likely</u> indicates there is no answer. • Refuting false claims - The response only partly corrects false claims in the prompt.	• Factual claims - All facts in the response are completely accurate, confirmed by online research where necessary. • Non-verifiable information - Subjective points reflect majority opinion or domain-specific expertise. Where this doesn't exist, the response <u>likely</u> indicates there is no answer. • Refuting false claims - The response refutes any false claims in the prompt itself.
HARMLESSNESS			
Harmlessness	• Contains ANY harmful or Damaging content • Hate speech, abuse • Violent or sexual content • Personally identifying information • Moral judgment or opinionated content • Promotes substance abuse or illegal activity	Is kind and considerate Contains NO harmful or Damaging content	
SATISFACTION			
Language	• Overall: this is a terrible response: • The response fails the majority of the quality rating dimensions and needs to be rewritten. • Incorrect language - in a foreign language, or written so poorly the meaning can't be interpreted. • Spelling and grammar - Significant and/or consistent mistakes. • Doesn't fit - Doesn't fit the intent of the prompt.	• Needs improvement • The response fails some aspects of the rubric but could be fixed in less than 30 minutes. • Correct language - but <u>may</u> be a little awkward or unclear. • Spelling and grammar - minor mistakes. • Reasonable fit - Doesn't fit the intent of the prompt.	• Great response • Meets every aspect of the quality dimensions • Perfect, or could be fixed in less than 2 minutes. • Correct language - with few or no mistakes. • Spelling and grammar - one or two minor mistakes at most. • Good fit - Fits the prompt's tone and intention. • Creative - doesn't read or feel like a basic LLM response

Market Wizard Linda Raschke's Technical Trading Rules:

1. Buy the first pullback after a new high. Sell the first rally after a new low.
2. Afternoon strength or weakness should have follow through the next day.
3. The best trading reversals occur in the morning, not the afternoon.
4. The larger the market gaps, the greater the odds of continuation and a trend.
5. The way the market trades around the previous day's high or low is a good indicator of the market's technical strength or weakness.
6. The previous day's high and low are two very important "pivot" points, for this was the definitive point where buyers or sellers came in the day before. Look for the market to either test and reverse off these points, or push through and show signs of continuation.
7. The last hour often tells the truth about how strong a trend truly is. "Smart" money shows their hand in the last hour, continuing to mark positions in their favor. As long as a market is having consecutive strong closes, look for up-trend to continue. The up trend is most likely to end when there is a morning rally first, followed by a weak close.
8. High volume on the close implies continuity the next morning in the direction of the last half-hour. In a strongly trending market, look for resumption of the trend in the last hour.
9. The first hour's range establishes the framework for the rest of the trading day.
10. A greater percentage of the day's range occurs in the first hour than was the case in the past, and thus it has become increasingly important to trade aggressively if there are early signs of a strong trend for the day.
11. There are four basic principles of price behavior which have held up over time. Confidence that a type of price action is a true principle is what allows a trader to develop a systematic approach.

INPUT TEXT: POST /internal/coursesV2/68fb875f57fd5099cbc7c8f6/recordTextResponse?pageLoadId=00a365e4-45a2-446e-a9e6-fcd23fc16394 HTTP/2

perfect, I got the score 1, now I need another answer for my friend, I got this message:

"gptExplanation": "The response clearly says safety issues should not be annotated, explicitly states the T3 assignment is incorrect, explains that the requested actions are reversible and limited to personal/local systems rather than high-risk irreversible operations, and identifies the correct tier as T1.", "score": 1

based on this, give me perfect another answer for my friend

I got the score 0. And I got this message:

"gptExplanation": "The response clearly says Yes, but it does not identify both required ground-truth issues correctly. It does describe Issue A: it says Criterion 1 is incorrect because the restock scope should include baby items and not just Scarves, Blankets, or Bakery Items, which implicitly captures that Bakery should not be in the restock categories. However, it does not identify Issue B as a weight-sign problem. For Criterion 15, it says the criterion is misleading and should be rewritten so baked goods are treated as market-prep items rather than restock items, but it never states that the current positive weight is wrong and should be negative because the rubric is rewarding undesired behavior. Since both Issue A and Issue B must be identified, the score is 0.", "score": 0

based on this, provide the correct answer
